

EXP – 1 Create a simple cloud software application for flight reservation system using any cloud service provider to demonstrate SaaS

Done by: Juhi Surin

Register no. :192525148

Aim:

To develop a cloud-based Flight Reservation System using Zoho Creator (SaaS) that enables users to book airline tickets and automatically calculates the total fare including GST.

Procedure:

1. Log in to Zoho Creator and create a new application named Airline Reservation System.
2. Create an Airline form and add the required fields for passenger and booking details.
3. Configure the Source and Destination dropdown fields with city names.
4. Create a workflow to automatically calculate the Total Fare and Grand Total with 18% GST.
5. Enter the passenger details and submit the form to save the reservation.
6. View the stored booking details and calculated fare in the Airline Report.

Implementation Steps :

Step 1: Log in to Zoho Creator and create a new application named Airline Reservation System.

Step 2: Create an Airline form and add the required fields for passenger and booking details.

Step 3: Configure the Source and Destination fields using dropdown values.

Step 4: Create a workflow to calculate the Total Fare and Grand Total with 18% GST automatically.

Step 5: Enter the passenger details and submit the form to store the reservation.

Step 6: View the reservation details and calculated fare in the Airline Report.

Output:

1. Form

The screenshot shows the Zoho Creator Form Builder interface for an Airline Reservation System. The form is titled "Airline" and is being edited. The form fields are organized into a grid. The "Basic Fields" section on the left includes fields for Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, and Drop Down. The main form area contains the following fields: Booking ID (Auto Number), Passenger Name, Passenger Email ID, Phone no., Journey Date, Source, Destination, No. of Passengers, Fare Per Passenger, Total Fare, and Grand Total with GST. The "Field Properties" panel on the right shows the properties for the "Booking ID" field, including Field name, Field link name, Validation, Start Index, and Appearance.

2. Workflow

The screenshot shows the Zoho Creator Workflow Builder interface for an Airline Reservation System. The workflow is titled "Flight" and is being edited. The workflow steps are organized into a grid. The "Deluge Script" section on the left includes a script for calculating the Grand Total with GST. The script is as follows:

```
1 if(input.No_of_Passengers != null && input.Fare_Per_Passenger != null)
2 {
3   input.Total_Fare = input.No_of_Passengers * input.Fare_Per_Passenger;
4   input.Grand_Total_with_GST = input.Total_Fare + input.Total_Fare * 18 / 100;
5 }
6
```

3. Report

The screenshot displays the Zoho Creator interface for an 'Airline Reservation System'. The left sidebar contains a menu with 'Airline' and 'Airline Report' (highlighted). The main area shows a table titled 'Airline Report' with the following data:

Booking ID	Passenger Name	Passenger Email ID	Phone no.	Source	Destination	No. of Passengers	Journey Date	Fare Per Passenger
4	MS Dhoni	123@gmail.com	+912424242424	Bengaluru	Kolkata	2	30-Jul-2026	₹ 300.00
3	Virat Kohli	xyz@gmail.com	+91101010101	Ranchi	Delhi	3	30-Jul-2026	₹ 400.00
1	Juhi Surin	abc@gmail.com	+919876543210	Chennai	Ranchi	4	30-Jul-2026	₹ 500.00

The interface includes a top navigation bar with the application name, a sidebar with a user profile 'Juhi Sakshi', and a table footer indicating 'Showing 3 of 3'.

Result:

Thus, the Airline Reservation System was successfully implemented using Zoho Creator.
